

## Webinar Collaboration Project

- The assignment is a chain/collaboration project using Digital Performer.
- The cue is about 30 seconds in length.
- The project is 24-bit, 48k, 140bpm, in 4/4 time.
- Each person adds **ONE** track (mono or stereo) in the form of a VI, external keyboard, synth, module, voice, or other live instrument.
- If you add a MIDI part assigned to a keyboard or VI, print your MIDI into digital audio.
- Please add one musical element, not layers of combined instruments and tracks.
- Do not add any FX, plugins, or additional tracks.
- Do not change the key, tempo, or meter.
- Do not edit any of the audio parts or add any automation.
- Do not change the project resolution.
- Simply add your part, clean up the project, Zip and share with the next person.
- Label your track with your name or initials. You can also put your name in the comments field for your track (if you want).
- Let's see how many people can get their hands on this project.
- Only one person is allow to work on it at any given time. It should move linearly from one person to the next.
- If you finish and don't know anyone to send it to, send it back to Glenn and he will assign it to someone else directly.
- I will edit and mix the project once the tracking is completed.
- Have fun and try to keep the project for no longer than two days.
- Oh, as a reminder...add only **ONE** track :-)
